

*Informational Sessions for  
Smart Grid and Solar Power for Westerville Public Power Consumers*

*Wednesday, February 18, 2009*

*10:00 a.m. and 2:00 p.m.*

*City of Westerville Electric Division Offices  
139 E. Broadway Avenue*

Thank you for your interest in the Westerville Smart Grid Project. If you are considering joining the pilot group, or if you are interested in the specifics of Smart Grid, please attend one of the informational sessions. The design and installation **teams** will present an overview and answer your questions about the technical and financial aspects of the project. Sample contracts will be provided to those seriously considering participating by agreeing to purchase the solar panels and allowing Westerville Electric Division to install the additional equipment in their building or home.

While the initial pilot project will only allow a small number of sites at this time, the expectation is that the success of the pilot will lead to widespread use of energy efficiency, Smart Grid and Solar power to benefit the residents of Westerville.

Please RSVP to Melissa Pavolino at the City of Westerville Electric Division by phone at 614-901-6702 or by email at [Melissa.Pavolino@westerville.org](mailto:Melissa.Pavolino@westerville.org).

A battery system charged by solar power providing energy from the sun and the ability to control consumption.
